[Press Release \(208,313\)](#)

Finding reliable solar installation pros in today's crowded market can be difficult. As one of the few solar energy providers recognized as a Military Trusted Partner through MyBaseGuide, ProLux Energy is the way to go. As a veteran-owned, family-first brand, ProLux stays true to their word of simplifying the complexities and nuances in the solar industry with great customer service.

Scottsdale, AZ – Good news for military members and families seeking renewable energy solutions: **ProLux Energy** is now a military-trusted partner through MyBaseGuide. Now it's easy to find reliable solar installation professionals that put their customers first.

MyBaseGuide is a free online directory connecting over 500 military bases worldwide. ProLux Energy has become one of the few solar energy providers to be recognized as a Military-Trusted Partner through MyBaseGuide, providing an additional layer of confidence for customers seeking renewable energy solutions.

As a veteran-owned company, ProLux Energy offers discounts on its services for US military personnel and veterans through this partnership. As countries and families invest more in solar energy to reduce environmental impact, it's important that they access reliable solutions that offer value for money. This solar energy provider seeks to fill the gap of customized renewable energy solutions for clients.

"ProLux was founded after working for other solar companies that didn't really know what they were doing or settled for "good enough," says ProLux Energy founder and owner, Cameron DeLoach. "We don't settle for anything less than the best solution for any of our clients – and our commitment to those standards meant a lot to our partners in the military community."

One thing that stands out about this solar company is that instead of marketing one-size-fits-all systems which, according to Cameron is "unfortunately very common – it's like slapping a bandaid on our energy crisis and hoping it works", ProLux first completes a full energy audit for each home that translates directly into their specific solar design.

A ProLux Energy solar system can offset up to seven tonnes of carbon dioxide annually, equal to planting 236 trees. The average life of a solar panel is 30+ years, making it an ideal investment for long-term sustainability. By opting for solar energy, families can come close to or fully eliminate their electricity bills, reduce their carbon footprint, and usually do so without putting any money down through ProLux's unique financing partners.

About ProLux Energy

ProLux Energy is a leading solar energy solutions provider committed to helping families beat inflation and utility rate hikes. The company serves residential and commercial customers with a wide selection of high-quality solar products and services designed to deliver maximum efficiency. ProLux Energy's goal is to be the industry leader in reducing America's carbon footprint by helping reduce energy waste and expanding the use of renewable resources.
